

## Quest Discovery Wizard for SharePoint

### Gone Wild with SharePoint? Track it!

The use of Microsoft® SharePoint® as an effective, user-friendly collaboration tool for organizations is quickly becoming the industry standard. Today, the adoption of SharePoint is often by frontline operational staff and end users: workgroups create collaboration workplaces beyond the primary corporate SharePoint site or before the entire organization moves to full-scale SharePoint deployment. As a result, IT administrators may not be aware of the scope and state of many of the SharePoint sites within their environment. This can lead to infrastructure issues such as those associated with network performance, security, support and information compliance.

### Discover Your SharePoint Environment

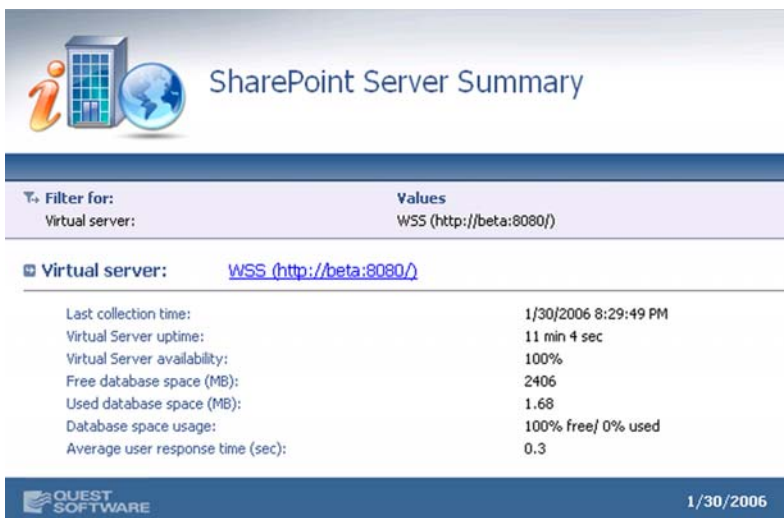

Quest® Discovery Wizard for SharePoint helps you **understand what you've got!** Searching for SharePoint servers and sites on your network is quick and easy with the Discovery Wizard for SharePoint. Whether you're using SharePoint Portal Server or Windows SharePoint Services, this audit discovery tool automatically identifies all the SharePoint servers, site collections and sites within your environment. You can also explore your SharePoint resources by navigating websites and browsing through sites and portal content.

### Easy to Use, Customizable Search Tool

Discovery Wizard for SharePoint is quick to download and a snap to use, quickly enabling users to scan all standard and non-standard ports and even customize their search scope to include domain, organizational unit or individual computers. With no learning curve and little start-up effort, **knowing what's out there has never been easier!**

### SharePoint Inventory at a Glance

Discovery Wizard for SharePoint gathers critical data about your SharePoint inventory such as server metrics and site details, including site size, author, last modification date, hit count and more. The results of the discovered inventory are displayed in two, easy-to-read HTML reports – giving you the **critical information you need at your fingertips!**

**SharePoint Server Summary**

Filter for:	Values
Virtual server:	WSS (http://beta:8080/)

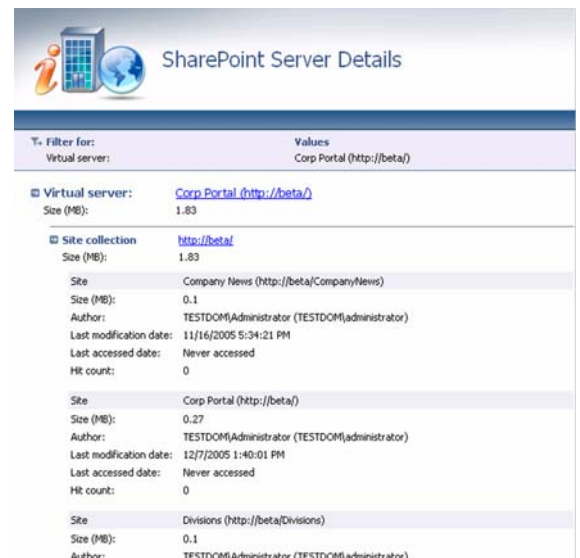

Virtual server: [WSS \(http://beta:8080/\)](http://beta:8080/)
