

Microsoft System Center Data Protection Manager 2007 and Quest Recovery Manager for Active Directory and Exchange

Ensuring Your Critical Business Information is Protected and Ready for Restore 24 x 7

Active Directory (AD) and Exchange are two of the most critical systems in your Windows network. Together they create the foundation on which numerous additional applications rely. Organizations today need the ability to quickly and confidently search and restore this critical data.

Microsoft System Center Data Protection Manager (DPM) 2007 takes a new approach to Windows backup and recovery—delivering continuous data protection for Microsoft application and file servers to a seamlessly integrated secondary disk and tape solution on the DPM server. DPM enables rapid and reliable recovery through advanced technology for enterprises of all sizes.

Microsoft designed DPM 2007 to provide a better backup and more reliable restore for Windows Server® applications, such as SQL Server, Microsoft Exchange Server, Microsoft Office SharePoint® Portal Server, Microsoft Virtual Server, as well as Windows file services. DPM 2007 blends the best aspects of continuous data protection with traditional tape backup.

Taking Recovery to the Next Level

In many instances recovery must be done on a granular level – recovering only specific pieces of information. DPM cannot provide this level of recovery alone. Working with Quest's Recovery Manager solutions, you can quickly identify modified data via online comparison reports. Once that data has been identified, Recovery Manager quickly restores at the object level with attributes intact for Active Directory data, and at the message level for Exchange.

Granular Recovery of Active Directory

DPM protects Active Directory by providing a backup of domain controller system state. Quest Recovery Manager for Active Directory integrates with DPM, leveraging backups created by DPM to provide:

- Online restore of any object in AD (e.g., restoring a deleted user account with all of its group memberships, back-linked attributes and password policies)
- Granular restore, down to individual attributes
- Comparison reports that detail what has been deleted and changed in AD, to facilitate troubleshooting and speed a complete recovery

Message-Level Recovery of Microsoft Exchange

DPM provides continuous data protection for Microsoft Exchange Server. Quest Recovery Manager for Exchange integrates with DPM, leveraging the DPM technology to provide:

- Item-level recovery
- Restore of recovered Exchange data to production Exchange server mailboxes and public folders, PSTs, EML, MSG or .TXT format
- Extensible search capability including deleted item, date, attachment type and message class
- Full public folder tree recoverability

Microsoft DPM and Quest Recovery Manager solutions provide a complete backup and recovery solution with unmatched capabilities that will ensure the data within your key business applications is protected.

About Quest Software, Inc.

Quest Software, Inc. delivers innovative products that help organizations get more performance and productivity from their applications, databases and Windows infrastructure. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 50,000 customers worldwide meet higher expectations for enterprise IT. Quest Software can be found in offices around the globe and at www.quest.com.
