

"Coexistence ... zero impact... that's what we needed. And that's what we found with Exchange Migration Wizard. Our users don't even know it's happening!"

—Jason Wilkins
Head of Information Technology
Xstrata Services (UK) Ltd.

- Ensures ZeroIMPACT on users and help desk
- Automates Outlook client profile updates
- Monitors the entire migration with Project Manager and, if anything unexpected occurs, complete information is available for troubleshooting
- Executes migration tasks in parallel, which shortens the time to move data and allows the new environment to operate in native mode from day one
- Migrates automatically and switches the mailbox in a way that allows a user to keep their existing Offline Folders (.ost) file after connecting to the new Exchange 2003/2007

Quest® Exchange Migration Wizard

ZeroIMPACT™ Migration to Exchange 2003/2007 with True Coexistence

Quest® Exchange Migration Wizard enables organizations to migrate from Exchange 5.5 to Exchange 2003/2007 with ZeroIMPACT™ on the end user. Enabling you to rapidly move massive amounts of messaging data, Exchange Migration Wizard ensures 24x7 coexistence between migrated and unmigrated users through real-time synchronization of calendars, distribution lists and public folders. Exchange Migration Wizard has no competition. Its unrivaled technology provides unique benefits and advantages:

Ensure Uninterrupted User Messaging and Collaboration

Exchange Migration Wizard enables the Exchange 5.5 and Exchange 2003/2007 environments to coexist during the migration. You can ensure coexistence by migrating and synchronizing Exchange directory data, public folders and calendar information. Users will continue to exchange messages, view calendar status and access synchronized public folders, regardless of whether their mailbox migrated.

Deliver ZeroIMPACT on Users and the Help Desk

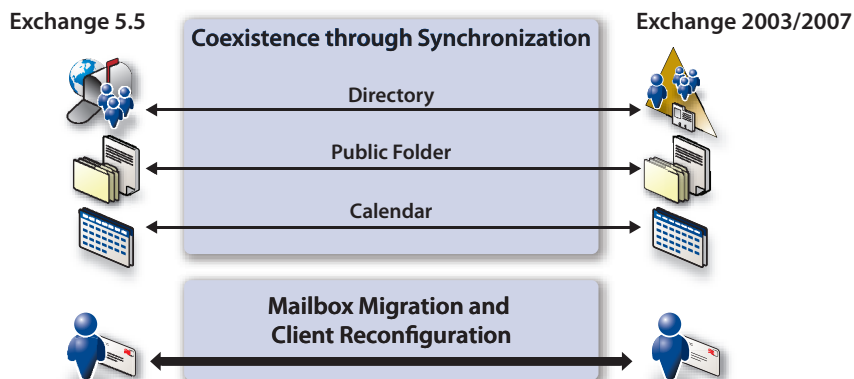

In addition to not interrupting user collaboration, Exchange Migration Wizard enables you to automate the updating of Outlook client profiles without any effort by the user. This feature makes the final step of the migration invisible to users, which in turn means they'll need no assistance from the help desk.

Simplify Administration

Two-way, real-time synchronization of administrative changes means you only need to make changes once. Exchange Migration Wizard automatically updates the other environment, saving you time and increasing directory accuracy.

Lower Costs

Costs are reduced due to shorter migrations, the scheduling and automating of tasks and the ability to track the progress of the migration. Most importantly, true coexistence eliminates productivity losses due to interrupted workflow.

System Requirements

Operating Systems:

Source Servers:

- Windows NT 4.0 Service Pack 5 or later, or Windows 2000
- Exchange Server 5.5 Service Pack 4 or later
- Collaborative Data Objects. (CDO.dll) version 5.5.2657.5.5 or later

Target Servers:

- Windows 2000 Service Pack 3 or later
- Exchange Server 2000 Service Pack 3 or later, or Exchange 2003, or Exchange 2007
- Collaborative Data Objects. (CDO.dll) version 6.0.6487.2 or later

Exchange Migration Wizard

Console:

- Windows 2000 or Windows 2003
- MDAC 2.6 or later
- Outlook 2000 or later with Collaboration Data Objects

Exchange Migration Wizard

Database:

- Microsoft SQL Server 2000 or Microsoft SQL Server Desktop Engine (MSDE)

Reconfigure On the Fly and Speed Migration

Typical deployment of Exchange 2003/2007 requires reconfiguration. Exchange Migration Wizard can reconfigure the Exchange environment during the migration by uniting Exchange organizations, or merging or splitting servers and sites. Migration tasks can be executed in parallel, which shortens the time to move data and allows the new environment to operate in native mode from the beginning.

Better Control and Safety

The migration project is set up, controlled and monitored by Exchange Migration Wizard Project Manager. If anything unexpected occurs, complete information is available for troubleshooting.

Synchronization with Exchange 5.5/2000/2003: Directories, mailboxes, calendars and public folders are continuously synchronized between the target and source Exchange organizations. This ensures user coexistence and collaboration throughout the migration.

Transparent Migration for Remote Users: With its Remote Users Collection feature, Exchange Migration Wizard automatically migrates and switches mailboxes, enabling remote and laptop users to keep their existing local Offline Folders (.ost) file after connecting to a new Exchange mailbox.

Online Mailbox Migration: Throughout migration processes, users can access their mailboxes at any time. During the migration, e-mail is automatically redirected to the mailbox in use, which guarantees that messages are not lost and bandwidth is not wasted by delivering duplicate messages to each mailbox.

Automatic Client Reconfiguration: Automatically updating client profiles when a user logs on to the network, the logon script utility eliminates the need to manually reconfigure the user's desktop.

Data Compression: Compression rates up of to 10:1 accelerate data movement and reduce the bandwidth used by the migration.

Distributed, Parallel Synchronization and Data Movement: Exchange Migration Wizard's scalable architecture routes data directly between source and target servers. Directory synchronization and data movement occur between multiple source-target pairs in parallel, reducing time and costs.

Centralized Project Management: Exchange Migration Wizard Project Manager provides control over the migration process and comprehensive information on the migration status and history.

Scheduled, Unattended Data Movement: Scheduled data movements free the administrator's time and allow data to be migrated during periods of low network traffic. This capability shortens the length of the migration project and reduces overall costs.

ADC Compatibility: Exchange Migration Wizard can be used in conjunction with Microsoft's Active Directory Connector (ADC). What's more, it can be introduced during existing migration projects in order to quickly move mailboxes.

About Quest Software, Inc.

Quest Software, Inc. delivers innovative products that help organizations get more performance and productivity from their applications, databases and Windows infrastructure. Through a deep expertise in IT operations and a continued focus on what works best, Quest helps more than 18,000 customers worldwide meet higher expectations for enterprise IT. Quest Software can be found in offices around the globe and at www.quest.com.
