

# Solutions for Coexisting Between Lotus Notes and Microsoft Platforms

## Ensure Seamless Messaging and Collaboration to Maintain Organizational Productivity

A transition from IBM Lotus Notes to Microsoft Exchange and SharePoint does not happen overnight—it usually takes weeks, months, or even a year for large organizations. Because your e-mail and collaboration infrastructures are critical to your business, the old and new environments must coexist seamlessly during the transition. In addition, if you're planning for an indefinite or prolonged coexistence period, your users must be able to access e-mail and shared applications as well as schedule meetings, whether they are still on Notes or have been moved to the Microsoft platform.

Quest Software offers solutions for Notes-to-Microsoft coexistence scenarios of any size.

## Ensure Fidelity of E-mail and Calendar Data Sent Between Notes and Exchange

Quest Coexistence Manager for Notes complements Notes Migrator for Exchange by providing high-fidelity e-mail, calendaring, and document hyperlink coexistence. It also provides ongoing coexistence for organizations facing prolonged coexistence scenarios. Coexistence Manager for Notes does all of the following:

- Maintains fidelity of recurring calendar invitations sent between Notes and Exchange users
- Retains all attachments and avoid extraneous attachments in calendar invitations sent between Notes and Exchange users
- Preserves the native appearance of Notes image icons (such as database, view, and document links) embedded in messages sent to Exchange

## Maintain Document Link Functionality

Notes Migrator for Exchange, Notes Migrator for SharePoint, and Coexistence Manager for Notes work together to maintain Notes document link functionality and preserve workflow. Using the Quest Link Tracking Service, these solutions recognize document hyperlinks in e-mail and automatically redirect the user to the current location of the application—either in Notes or in SharePoint.

## Integrate Notes Clients with SharePoint

With Notes Migrator for SharePoint, you can:

- Selectively drag and drop documents from your client desktop and push content directly to a SharePoint target
- Extend existing Notes applications to automatically push content to SharePoint

## Surface Live Domino Applications in SharePoint

With Quest Web Parts for SharePoint, you can:

- Surface live Notes applications in SharePoint (via Web Services) for reading and updating
- Integrate e-mail into SharePoint lists and libraries
