

Quest® Notes Migrator

for SharePoint

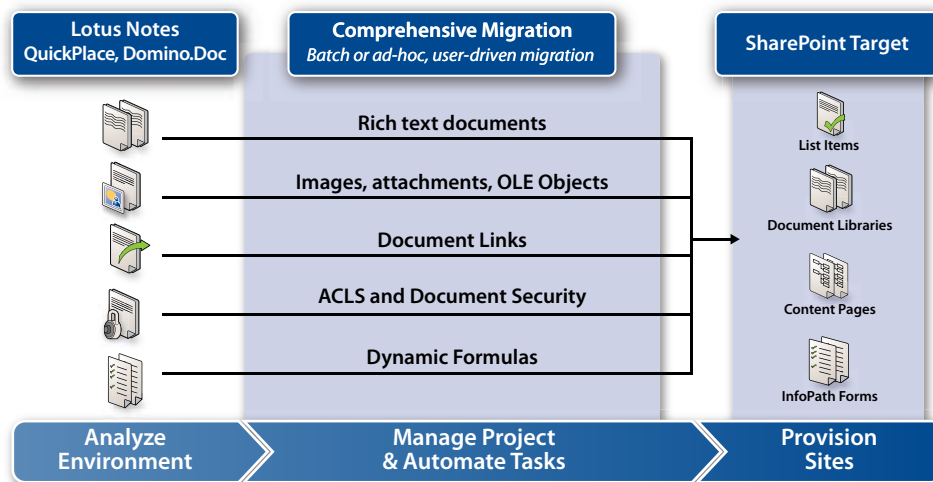

Simple, Reliable, Cost-Effective Migration from Lotus Notes

Organizations that use Lotus Notes, QuickPlace/QuickR, or Domino.Doc as their workflow, collaborative application, and document management platform are moving to SharePoint 2007 for this functionality. Since Notes applications are often complex and highly customized, this type of migration can be much more difficult than moving Notes mail and calendar data to Exchange. To ease the challenge of this type of migration, you need a tool to analyze your Notes applications and reliably move your essential application content without impacting end users.

Quest Notes Migrator for SharePoint is a cost-effective tool for this kind of migration. It gives you an in-depth understanding of your current Notes usage to help you build a comprehensive migration plan. Then you can use Notes Migrator for a simple, automated migration of standard Notes applications or an advanced migration of complex custom Notes applications.

Free Discovery & Analysis of Your Notes Environment

Notes Migrator for SharePoint includes free analysis your Notes application environment so you can estimate the scope of the migration project and manage the process more effectively. Prior to the migration, Notes Migrator classifies all the databases in your environment, identifies unused applications, assesses data and design complexity, and makes migration recommendations. This reduces your risk of migration failure and keeps you in control.

Reliably Migrate Business-Critical Content

Notes Migrator for SharePoint provides reliable, scalable content migrations from Lotus Notes, QuickPlace/QuickR and Domino.Doc to SharePoint lists, document libraries, content pages and InfoPath forms. Advanced data extraction capabilities ensure that all of your valuable business data is preserved.

Choose the Best Migration Path

Notes Migrator for SharePoint supports bulk migration of entire databases or user-driven, ad-hoc transfer of selected documents. This allows you to decide which method best suits your organization. This tool can be used in conjunction with Quest Notes Migrator for Exchange, Quest Coexistence Manager for Notes and Quest Web Parts for SharePoint, allowing you to leverage a robust migration solution from a single vendor. **Reduce Migration Costs**

Notes Migrator for SharePoint features customizable, reusable data definitions that help dramatically reduce the cost of migration. Easy to use and deploy, the tool allows you to quickly start and complete your migration so you can rapidly get the most from your SharePoint investment.

Notes Migrator for SharePoint Features/Benefits:

Free Discovery/Analysis Tool – The Discovery Edition of Notes Migrator for SharePoint is now free when downloading a free trial of Notes Migrator for SharePoint at www.quest.com/notesanalysis. The trial download provides full functionality of the Discovery Edition, including all the discovery, analysis and reporting features, as well as 30 days of free support.

- Provides reliable, scalable content migrations from Lotus Notes, QuickPlace/QuickR and Domino.Doc to SharePoint without data loss
- Fully supports migration of complex, business-critical Lotus application content to SharePoint lists, document libraries, content pages and InfoPath forms
- Includes free discovery and analysis – discovers Notes databases across all servers in all locations, classifies applications, analyzes application usage and data and design complexity.
- Reduces cost of migration with automated tasks and customizable, reusable data definitions
- Preserves all valuable business data with advanced data extraction capabilities
- Supports bulk migration of entire databases or user-driven, ad hoc transfer of selected documents

System Requirements

Notes Data Extraction*:

- Windows XP, Windows 2003 or Windows Vista
- Lotus Notes 6.0 client or higher (may connect to remote Notes 3.0 or higher servers on any platform)
- .NET Framework 3.0

SharePoint Data Load*:

- Windows 2003
- Windows SharePoint Services 3.0 or Office SharePoint Server 2007
- .NET Framework 3.0
- Administrator access on the SharePoint server, database and site collection

* Notes Data Extraction and SharePoint Data Load may occur simultaneously in a single process or in different processes on different machines.

Understand Application Usage – Performs scans of selected databases to determine which have been used recently and which have not. Discover which applications make use of complex data features such as embedded objects, document links, embedded forms and digital encryption.

Analyze Application Designs – Scan your application databases to assess design complexity. Automatically compare databases with their original templates to determine which design elements have been added or modified. Discover which forms are actually being used as content types.

Manage Migration Project – Decide what data to migrate and determine where it should go based on usage, the characteristics of the application and complexity of the data. Monitor each task and keep control of the migration process.

Perform a Complete Migration – Migrate all of your complex Notes, QuickPlace/QuickR and Domino.Doc data, including rich text, embedded images, attachments, OLE objects, DocLinks and formulas.

Leverage the Benefits of SharePoint – Take advantage of advanced SharePoint features such as content types, folders, lookup fields, approval state, versioning, workflow state, InfoPath Form Libraries, content publishing pages, wiki pages, and web part pages .

Automate the Migration Process – Assign and provision entire SharePoint sites and/or run the appropriate migration jobs for each database using a powerful rules-based engine.

Manage Simple and Complex Jobs – Use standard data definitions for common application templates such as discussion, document library and team room. Create reusable, advanced data definitions for complex custom Notes applications.

Ensure Security Throughout the Migration – Migrate user and group permissions, application-level access control lists and Notes document-level security to the equivalent SharePoint security constructs.

Retain Built-In Notes Links – Leverage Notes Migrator's Link Tracking Service to ensure that your inter-document DocLinks and HTTP links continue to work before, during and after the migration process.

Automatically Map Users and Groups – Preserve all identities in Notes; automatically map Notes user and group names to Active Directory identities for use in SharePoint records.

Empower Users to Migrate Content – Integrate Notes Migrator for SharePoint into the Notes client to allow users to select the documents they want to migrate. This ad-hoc migration support complements the tool's bulk migration capabilities and allows users to transfer content via simple drag and drop operations.

Maintain Control of the Migration – Use a powerful LotusScript application programming interface (API) to customize existing Notes applications to connect them to SharePoint. This gives you complete control of the migration process and the end-user experience.

Notes Migrator for SharePoint comes in three editions with different capabilities based on the size and complexity of your migration project:

	Discovery & Analysis	Project Management	Site Provisioning	Content Migration
Free Discovery Edition	Yes	No	No	No
Standard Edition	Yes	No	No	25 DBs*
Premier Edition	Yes	Yes	Yes	100 DBs*

* Additional database migration licenses may be purchased separately
