Voluntary Product Accessibility

January 17, 2017

Product Name: Foglight®
Product Version: 5.7.x

Contact for more information: http://www.quest.com/legal/section-508.aspx

Summary Table

Criteria	Supporting Features	Remarks and explanations
Section 1194.21: Software Applications and Operating Systems	Supported with exceptions	
Section 1194.22: Web-based internet information and applications	Supported with exceptions	
Section 1194.23: Telecommunications Products	NA	
Section 1194.24: Video and Multi- media Products	NA	
Section 1194.25: Self-Contained, Closed Products	NA	
Section 1194.26: Desktop and Portable Computers	NA	
Section 1194.31: Functional Performance Criteria	NA	
Section 1194.41: Information, Documentation and Support	Supported	

Section 1194.21 Software applications and operating systems

Crite	eria	Supporting Features	Remarks and explanations	
(a)	When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.	Not Supported with Exceptions	Foglight definitions editor (if product provides access) does not usefully support keyboard navigation. Certain key components such as the Tree, TreeTable, and Charts are not navigable in most cases.	
(b.i)	Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards.	Supported	Foglight does not disrupt, disable, or interfere with any features of any other product or operating system accessibility features.	
(b.ii)	Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.	Supported	Foglight does not disrupt, disable, or interfere with any features of any other product or operating system accessibility features.	
(c.i)	A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes	Supported with comment	Where focus is navigable (see a) above for exceptions current focus is visible.	
(c.ii)	The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.	Supported		
(d.i)	Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology.	Supported with exceptions	Foglight has a web based console (graphical user interface) that is compatible with all major internet browser applications (IE, Chrome), which support Assistive Technology.	
(d.ii)	When an image represents a program element, the information conveyed by the image must also be available in text.	Supported with exceptions	Foglight intends to conform to this requirement and does to a great degree with the exception of charts which can represent vast volumes of data. Spending on the configuration there is an option to export chart data as a CSV for those interested in textual representation.	
(e)	When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	Supported	Foglight reuses images in a standard way.	
(f)	Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	Supported with exceptions	Foglight uses standard system functions to send textual information to the operating system. The project logo is text inside an image, but can be configured to have the equivalent text available as an alternate. Chart Legend text is presented in a bitmap but it is possible to build a page that uses the external legend component that details the data in HTML.	
(g)	Applications shall not override user selected contrast and color selections and other individual display attributes.	Not supported	WCF currently operates with a fixed size font in some areas and does not have an audio output mode. Screen readers are supported, but do not completely address users in need of merely enlarged print. The underlying architecture supports multiple sizes of text and scaling and this will be surfaced in a usable way in a future release.	
(h)	When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	Supported with exceptions	Foglight uses animation in the pulse gauge component. It is possible to convey the information represented by the animation in text as well though it may, at this time, require an additional label to be set.	

Criteria		Supporting Features	Remarks and explanations
(i)	Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	Supported with exceptions	While Foglight does not solely use color coding it is possible to build views with Foglight that do, althougit is not recommended.
(j)	When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided	NA	Foglight does not currently permit such adjustments.
(k)	Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	NA	Foglight does not use flashing or blinking. There is a option to "pulse if fatal" on some controls at a very slow rate of around 1 Hz. This can be disabled by the user.
(l)	When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.	Supported with exceptions	Foglight intends to conform to this requirement and does to a great degree. There may be a few form fields that need labels added.

Section 1194.22 Web-based internet information and applications

Crit	eria	Supporting Features	Remarks and explanations
a)	A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).	Supported with exceptions	Many non-text elements use ALT. Some are missing ALT. Sometimes the ALT text is identical to the following text.
b)	Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.	NA	WCF does not support the use of multimedia.
c)	Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.	Supported with exceptions	WCF supports this in principle but is is possible to build views with WCF that do not conform.
(d)	Documents shall be organized so they are readable without requiring an associated style sheet.	Not supported	Foglight currently requires style sheets.
(e)	Redundant text links shall be provided for each active region of a server-side image map.	Not supported	Most charts are implemented with Server Side mapping to date since the mapping is calculated dynamically no map exists to present to the browser. An alternate table based rendition of the chart data will solve this issue in future versions.
(f)	Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.	NA	Foglight does not use server-side image maps where a client side image map would be appropriate. Foglight does not use image maps other than for charting.
(g)	Row and column headers shall be identified for data tables.	Supported	Tables use industry standard markup (TH tag) to differentiate headers and data.
(h)	Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.	Supported	
(i)	Frames shall be titled with text that facilitates frame identification and navigation	Supported	Foglight only uses one frame, and it does use labels, in the Help Viewer.
(j)	Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.	Supported	Foglight does not use flashing or blinking.
(k)	A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in	Supported with large exceptions	It is possible to build text only version of any page you build with graphics in WCF but it is not done automatically, although eventually this will be possible with standard components.
	any other way. The content of the text- only page shall be updated whenever the primary page changes.		Note: Text-only mode is only necessary for compliance in the event that there is no other way to achieve compliance.
(l)	When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.	Supported	While Foglight uses scripting extensively UI elements injected into pages by scripting adheres to the same standards as the rest of the UI.
(m)	When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (I).	Supported	Foglight does not use applets or plug-ins.

Criteria		Supporting Features	Remarks and explanations	
n)	When electronic forms are designed to be completed on-line, the form shall allow	Supported	Foglight intends to conform to this requirement and does to a great degree.	
	people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.		There may be a few form fields that need labels added.	
o)	A method shall be provided that permits users to skip repetitive navigation links.	Not supported	Foglight has a tool/navigation pane that is prominently displayed at all times and cannot be skipped.	
(p)	When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.	Supported	Foglight does not explicitly use timing expect for session log out after a period of inactivity, in which case the user is warned and given an opportunity to extend the session.	

Section 1194.23 Telecommunications products

Crite	riteria Supporting Remarks and e Features		Remarks and explanations
(a)	Telecommunications products or systems which provide a function allowing voice communication and which do not the mselves provide a TTY functionality shall provide a standard non-acoustic connection point for TTYs. Microphones shall be capable of being turned on and off to allow the user to intermix speech with TTY use.	NA	
(b)	Telecommunications products which include voice communication functionality shall support all commonly used crossmanufacturer non-proprietary standard TTY signal protocols.	NA	
(c)	Voice mail, auto-attendant, and interactive voice response telecommunications systems shall be usable by TTY users with their TTYs.	NA	
(d)	Voice mail, messaging, auto-attendant, and interactive voice response telecommunications systems that require a response from a user within a time interval, shall give an alert when the time interval is about to run out, and shall provide sufficient time for the user to indicate more time is required.	NA	
(e)	Where provided, caller identification and similar telecommunications functions shall also be available for users of TTYs, and for users who cannot see displays.	NA	
(f)	For transmitted voice signals, telecommunications products shall provide a gain adjustable up to a minimum of 20 dB. For incremental volume control, at least one intermediate step of 12 dB of gain shall be provided.	NA	
(g)	If the telecommunications product allows a user to adjust the receive volume, a function shall be provided to automatically reset the volume to the default level after every use.	NA	
(h)	Where a telecommunications product delivers output by an audio transducer which is normally held up to the ear, a means for effective magnetic wireless coupling to hearing technologies shall be provided.	NA	
(i)	Interference to hearing technologies (including hearing aids, cochlear implants, and assistive listening devices) shall be reduced to the lowest possible level that allows a user of hearing technologies to utilize the telecommunications product.	NA	
(j)	Products that transmit or conduct information or communication, shall pass through cross-manufacturer, non-proprietary, industry-standard codes, translation protocols, formats or other information necessary to provide the information or communication in a usable format. Technologies which use encoding, signal compression, format transformation, or similar techniques shall not remove information needed for	NA	
(k.i)	access or shall restore it upon delivery. Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys	NA	

Criteria		Supporting Features	Remarks and explanations
	shall be tactilely discernible without activating the controls or keys.		
(k.ii)	Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys shall be operable with one hand and shall not require tight grasping, pinching, twisting of the wrist. The force required to activate controls and keys shall be 5 lbs. (22.2N) maximum.	NA	
(k.iii)	` /	NA	
(k.iv)	· · · · · · · · · · · · · · · · · · ·	NA	

Section 1194.24 Video and multimedia products

Crit	eria	Supporting Features	Remarks and explanations
(a)	All analog television displays 13 inches and larger, and computer equipment that includes analog television receiver or display circuitry, shall be equipped with caption decoder circuitry which appropriately receives, decodes, and displays closed captions from broadcast, cable, videotape, and DVD signals. As soon as practicable, but not later than July 1, 2002, widescreen digital television (DTV) displays measuring at least 7.8 inches vertically, DTV sets with conventional displays measuring at least 13 inches vertically, and stand-alone DTV tuners, whether or not they are marketed with display screens, and computer equipment that includes DTV receiver or display circuitry, shall be equipped with caption decoder circuitry which appropriately receives, decodes, and displays closed captions from broadcast, cable, videotape, and DVD signals.	NA	
(b)	Television tuners, including tuner cards for use in computers, shall be equipped with secondary audio program playback circuitry.	NA	
(c)	All training and informational video and multimedia productions which support the agency's mission, regardless of format, that contain speech or other audio information necessary for the comprehension of the content, shall be open or closed captioned.	NA	
(d)	All training and informational video and multimedia productions which support the agency's mission, regardless of format, that contain visual information necessary for the comprehension of the content, shall be audio described.	NA	
(e)	Display or presentation of alternate text presentation or audio descriptions shall be user-selectable unless permanent.	NA	

Section 1194.25 Self-contained, closed products

Crite	eria	Supporting Features	Remarks and explanations
(a)	Self contained products shall be usable by people with disabilities without requiring an end-user to attach Assistive Technology to the product. Personal headsets for private listening are not Assistive Technology.	NA	
(b)	When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.	NA	
(c)	Where a product utilizes touchscreens or contact-sensitive controls, an input method shall be provided that complies with §1194.23 (k) (1) through (4).	NA	
(d)	When biometric forms of user identification or control are used, an alternative form of identification or activation, which does not require the user to possess particular biological characteristics, shall also be provided.	NA	
(e)	When products provide auditory output, the audio signal shall be provided at a standard signal level through an industry standard connector that will allow for private listening. The product must provide the ability to interrupt, pause, and restart the audio at anytime.	NA	
(f)	When products deliver voice output in a public area, incremental volume control shall be provided with output amplification up to a level of at least 65 dB. Where the ambient noise level of the environment is above 45 dB, a volume gain of at least 20 dB above the ambient level shall be user selectable. A function shall be provided to automatically reset the volume to the default level after every use.	NA	
(g)	Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	NA	
(h)	When a product permits a user to adjust color and contrast settings, a range of color selections capable of producing a variety of contrast levels shall be provided.	NA	
(i)	Products shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.	NA	
(j.i)	Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: The position of any operable control shall be determined with respect to a vertical plane, which is 48 inches in length, centered on the operable control, and at the maximum protrusion of the product within the 48 inch length on products which are freestanding, non-portable, and intended to be used in one location and which have operable controls.	NA	
(j.ii)	Products which are freestanding, non- portable, and intended to be used in one location and which have operable controls shall comply with the following: Where	NA	

Criteria		Supporting Features	Remarks and explanations
	any operable control is 10 inches or less behind the reference plane, the height shall be 54 inches maximum and 15 inches minimum above the floor.		
(j.iii)	Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Where any operable control is more than 10 inches and not more than 24 inches behind the reference plane, the height shall be 46 inches maximum and 15 inches minimum above the floor.	NA	
(j.iv)	Products which are freestanding, non- portable, and intended to be used in one location and which have operable controls shall comply with the following: Operable controls shall not be more than 24 inches behind the reference plane.	NA	

Section 1194.26 Desktop and portable computers

Crit	eria	Supporting Features	Remarks and explanations
(a)	All mechanically operated controls and keys shall comply with §1194.23 (k.i) through (iv).	NA	
(b)	If a product utilizes touchscreens or touch-operated controls, an input method shall be provided that complies with §1194.23 (k.i) through (iv).	NA	
(c)	When biometric forms of user identification or control are used, an alternative form of identification or activation, which does not require the user to possess particular biological characteristics, shall also be provided.	NA	
(d)	Where provided, at least one of each type of expansion slots, ports and connectors shall comply with publicly available industry standards.	NA	

Section 1194.31 Functional performance criteria

Criteria Supporting Remark Features		Remarks and explanations	
(a)	At least one mode of operation and information retrieval that does not require user vision shall be provided, or support for Assistive Technology used by people who are blind or visually impaired shall be provided.	NA	
(b)	At least one mode of operation and information retrieval that does not require visual acuity greater than 20/70 shall be provided in audio and enlarged print output working together or independently, or support for Assistive Technology used by people who are visually impaired shall be provided.	NA	
(c)	At least one mode of operation and information retrieval that does not require user hearing shall be provided, or support for Assistive Technology used by people who are deaf or hard of hearing shall be provided	NA	
(d)	Where audio information is important for the use of a product, at least one mode of operation and information retrieval shall be provided in an enhanced auditory fashion, or support for assistive hearing devices shall be provided.	NA	
(e)	At least one mode of operation and information retrieval that does not require user speech shall be provided, or support for Assistive Technology used by people with disabilities shall be provided.	NA	
(f)	At least one mode of operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength shall be provided.	NA	

Section 1194.41 Information, Documentation and Support

Criteria		Supporting Features	Remarks and explanations
(a)	Product support documentation provided to end-users shall be made available in alternate formats upon request, at no additional charge	Supported	Online help is currently available in Microsoft HTML Help format and in PDF format upon request. Other product documentation is available in PDF format. With a special documentation license, our products support accessibility software that converts .PDF files into speech for the visually challenged.
(b)	End-users shall have access to a description of the accessibility and compatibility features of products in alternate formats or alternate methods upon request, at no additional charge.	Supported	
(c)	Support services for products shall accommodate the communication needs of end-users with disabilities.	Supported	Quest's Support Services are familiar with such features as keyboard access and other options important to people with disabilities.
			For technical assistance in the United States, you car contact Quest Support Services on a text telephone at (800) 306-9329 between 5:00 A.M. and 5:00 P.M. Pacific Time, Monday through Friday, excluding holidays.
