NetVault Backup 12.2 Product Release Update-Web-based Training

Description:

In this course, we will provide a detailed review of the new features and functional enhancements delivered in NetVault Backup version 12.2. This is not a comprehensive NetVault Backup training course, prior experience with NetVault Backup administration is assumed.

Training Delivery Modality:

This course is offered as web-based training.

Intended Audience:

Customers, partners, and internal Quest employees who need to understand what has changed with the release of NetVault Backup version 12.2.

Prerequisites:

The following prerequisites are <u>recommended</u> for this course:

- Prior completion of the NetVault Backup administration course series and/or a working knowledge of NetVault's system administration in a Windows, or Linux/Unix based operating environment.

Duration:

The duration of this course is approximately 30 minutes in length.

Course Objectives:

This course has the following objectives:

- Provides an overview of the key functional enhancements delivered in the NetVault 12.2 release which expanded on improvements in NetVault version 12.0 and 12.1. This release further addresses challenges to Enterprise Data Protection across five key areas which include:
    1. Controlling Data Growth
    2. Virtualization Protection
    3. Scalability
    4. Productivity
    5. Security and Access Control

Quest™
