

erwin® Data Literacy by Quest®

erwin® Data Literacy by Quest® enables organizations to curate and govern data assets so stakeholders can quickly discover data relevant to their roles and understand how to use and protect it within a business context. Empowering IT, data governance teams and business users with data literacy fuels accurate, actionable business insights and drives more strategic data collaboration and use across the enterprise.

With business glossary management, data stewardship and business-friendly data discovery capabilities, erwin Data Literacy ensures your organization is fluent in the language of data. Used in combination with erwin Data Catalog by Quest, stakeholders have an integrated and contextual view of the semantic, business and technical aspects of your entire data landscape.

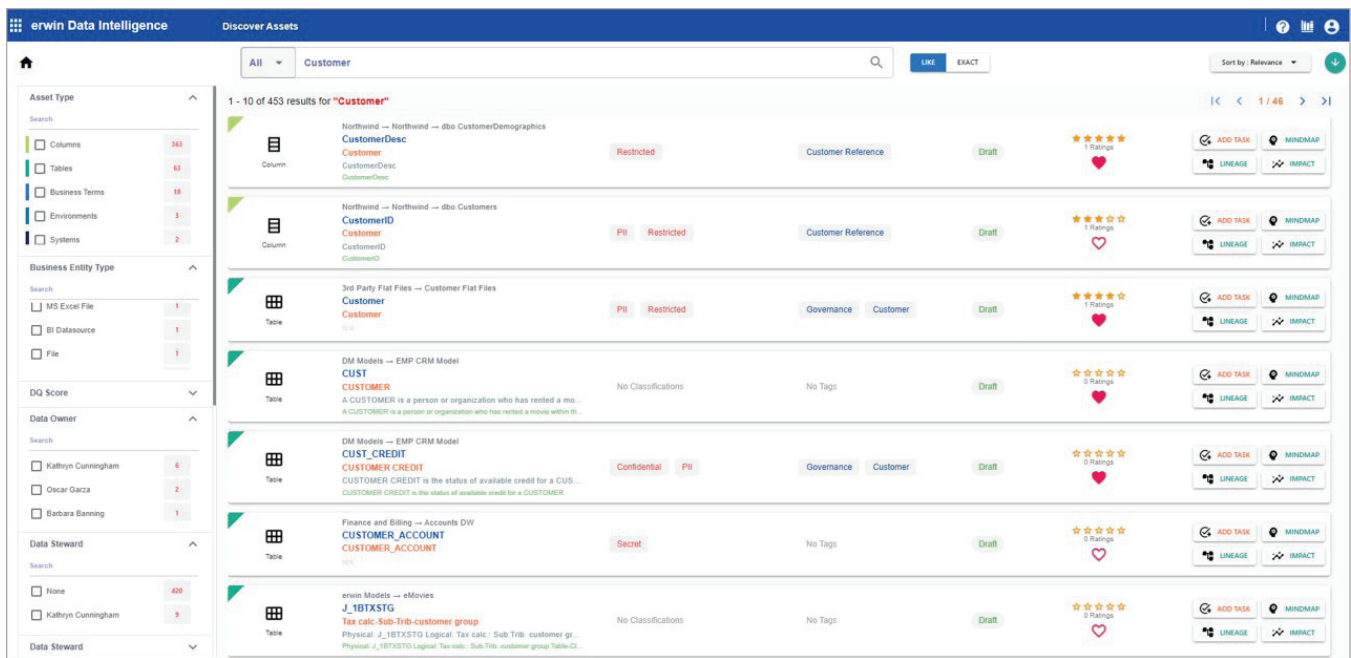

Key Features

erwin Data Literacy provides a strong foundation for organizational data governance programs and enables stakeholders across the organization to view data assets within relevant context through the following key features:

- **Flexible metamodel and role-based customization** — Tailor erwin Data Literacy to your organization's unique data governance framework. Leverage and customize out-of-the-box business assets and easily create new ones that best support your business. Efficiently create and assign access, governance tasks, workflows and notifications for key organizational roles, such as data stewards and data owners. Ensure business users only have access to assets required for their roles.

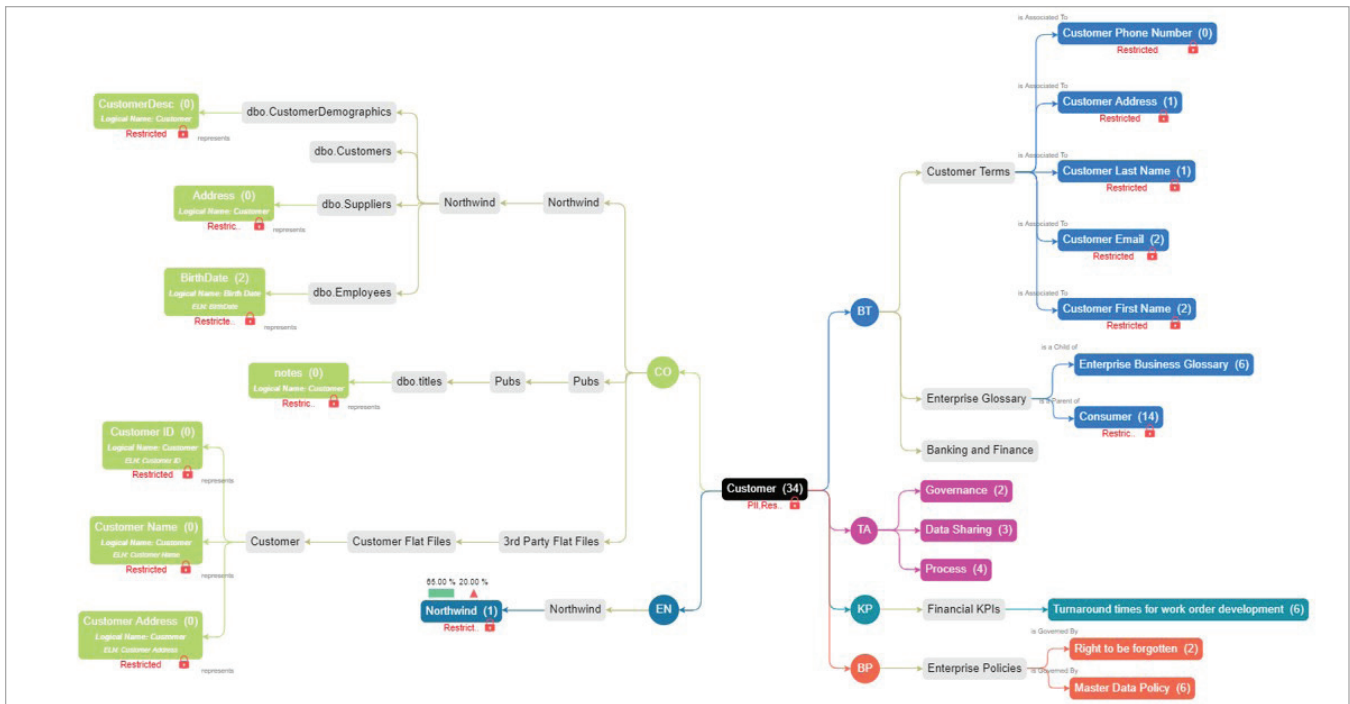

Benefits:

- Easily tailor a business-centric data governance framework to your organization to align stakeholders around data governance.
- Empower data governance teams and business users to find, understand, govern and best use data across your enterprise.
- Identify data connectivity, implications and impacts across the enterprise to better manage change.
- Give business context to physical metadata through business glossary authoring and workflows, leveraging provided industry terms and erwin Data Modeler by Quest naming standards integration.
- Use AI and other automation to speed creating and maintaining a governance framework, asset associations, and discovering and managing sensitive data.
- Help mitigate a wide range of risks to provide regulatory peace of mind.
- Fuel data governance, extend organizational data literacy, and build data trust through data intelligence.

Empower business users and data governance teams with consumer-like search and socialization capabilities in erwin Data Literacy to quickly find the best-fitting assets available. Filtered results are provided with data literacy visualizations and other aids providing business context, governance, and asset relationships to help users more fully understand them.

- Data stewardship and ownership** — Provide central access to business asset details, workflow, parties involved, asset history, related files, data classification and the ability to move assets forward or backward in a data governance workstream. Monitor governance progress through an interactive dashboard providing both a bird’s eye view of stewardship efforts and the drill-down details needed to take action.
- Business glossary management** — Build glossaries of business terms in taxonomies with synonyms, acronyms and relationships to describe the organization’s data assets, and leverage preloaded industry terms to accelerate deployment. Publish approved term standards to the wider organization to improve clarity and flag terms regarding regulatory requirements.
- Policy management** — Author, maintain and publish information policies, combined with roles and responsibilities, to reuse across the enterprise, informing business and technical stakeholders and improving compliance.
- Rule management** — Reduce risk and understand the impact of change by defining rules for the creation, use and management of terms, in business language, to ensure regulatory compliance.
- Sensitive data discovery** — Use erwin AIMatch to auto-match business and technical assets, and speed identifying, tagging and managing sensitive data elements (PII, GDPR, CCPA and more). Bulk classify all related assets leveraging lineage and mind map visualizations.
- Enterprise tags** — Tag business assets with hashtags to speed future discovery, organize for analysis and ready for automation. View all assets associated to a specific tag in list form or in a mind map.
- Integration with erwin Data Catalog** — Automate the creation and maintenance of a detailed metadata landscape to underpin data governance with accurate, up-to-date business and technical metadata.

Use erwin Data Literacy mind maps to easily understand the semantic relationships between different assets. Interactive drill-down and filter capabilities, combined with sensitive data classification and data quality information, ensure users are well-informed to guide decisions and actions.

- **Intuitive asset search and discovery** — A consumer-like, dynamic search experience makes it easy for non-technical users to quickly find and identify the best assets for their specific needs based on literacy visualizations, community ratings and contextual information all within reach.
- **Data literacy visualizations** — Drill-down mind maps detailing business asset relationships with physical, logical and governance metadata and detailed data lineage showing all data elements from source-to-target and transformations in-between help users quickly understand available data assets and guide usage.
- **Data quality visibility** — Data governance teams and business users have a direct view of associated data source quality scoring alongside all asset search results and within literacy visualizations to aid data fitness assessment, spot quality issues needing attention, and build data trust.
- **Business user socialization and collaboration** — Capture organizational data knowledge through community data asset ratings and strengthen

communication between business users, data owners and data stewards. Collaborate on data governance and raise data literacy through issue tracking and conversational capabilities within erwin Data Intelligence.

- **Data impact analysis** — See real-time impact diagrams that link core data elements to the business glossary, related databases, processes, applications and beyond. Then analyze and plan for changes to the data landscape.
- **Licensing and deployment** — On-premises and hosted deployment options are available with easy SAML 2.0 integration.

About Quest

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cyber security resilience, Quest helps customers solve their next IT challenge now. Quest Software. Where next meets now.
