Managing SharePoint Online with Metalogix® ControlPoint

Simplified SharePoint administration and governance

SharePoint Online administrators need some help. They're tasked with managing SharePoint to ensure users always have access to what they need without ever giving anyone — or themselves — too much access. But Metalogix® ControlPoint for Office 365 can help.

ControlPoint starts by providing visibility into the hierarchy of your SharePoint content architecture. Administrators and content owners can take advantage of the security-trimmed web interface, to easily explore, report, manage and secure any of their sites and lists/libraries to ensure users only ever have access to appropriate content.

So say goodbye to days of maintaining manual, error-prone, custom PowerShell scripts to manage and report on your environment. ControlPoint enables you to free up experienced administrators to tackle other value-add projects instead of spending time on minor changes.

With ControlPoint, you can go beyond simply learning about SharePoint Online best practices with the ability to:

• Apply rules to help enforce security and content policies

• Empower content owners to manage their own sites and content

• Clean up and monitor for unnecessary or excessive permissions

• Generate reports on user behavior

• Identify and tag sensitive content

FEATURES

Robust permissions reporting

Get visibility into your SharePoint security permissions. With ControlPoint, you can easily generate reports to understand how users are consuming content. Discover how closely your environment matches best practices and identify unnecessarily exposed content.

> "Instead of waiting a couple days for a PowerShell script to run and then clean up the results, with ControlPoint, I can do it myself and get the results in a few minutes."
>
> *Tanya Shmat, systems analyst, City of Bellevue*

BENEFITS:

• Ensure compliance with internal and external security policies

• Free up administrative resources with automated management tasks

• Secure the data in your environment with increased visibility into user behavior and permissions

• Protect sensitive or private content in your environment by quickly discovering if and where it has been shared
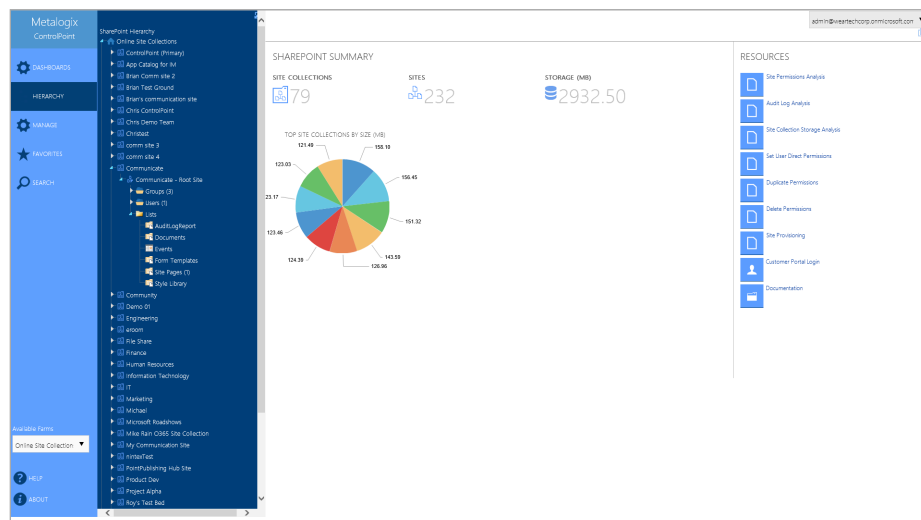

Get a high-level overview of your entire SharePoint Online environment from a single graphical dashboard.

ControlPoint also enables you to quickly and easily supply data to auditors for security audits.

Proactive security

Enforce security policies and control how access across your environment. With ControlPoint, you can:

- Perform bulk maintenance to permissions.

- Add or remove employee access as needed.

- Clean up SharePoint security to bring it into compliance and build out an optimum state.

In-depth analysis and reporting

Explore where sensitive content resides and find out who has access to it. ControlPoint enables you to easily report on and review sites for sensitive content and then drill down into user activity using audit data. Detailed reports also help you review your SharePoint storage and find out how it's being consumed.

Distributed SharePoint management

Enable content owners to easily manage their own sites and content with a security-trimmed set of tools that can be

access through an easy-to-use web interface — no local installation is required. Powerful security reports and audit features directly empower users so you can save administrative resources from repetitive, content-specific tasks.

Intuitive contextual reporting

Easily drill down to view your entire SharePoint hierarchy and make changes across multiple sites. This makes it easier than ever to control your SharePoint Online or hybrid environment. With ControlPoint, you can quickly view and analyze all of your sites and collections, no matter the version or where they exist, and then build unified reports directly.

ABOUT QUEST

Quest provides software solutions for the rapidly changing world of enterprise IT. We help simplify the challenges caused by data explosion, cloud expansion, hybrid data centers, security threats and regulatory requirements. Our portfolio includes solutions for database management, data protection, unified endpoint management, identity and access management and Microsoft platform management.
