

Essentials for Office 365

Simple. Powerful. Unified.

The complete solution to migrate to Office 365

End-to-end Solution for Office 365 Migration

Metalogix Essentials for Office 365 provides all of the functionality needed to perform the lifecycle management of an Office 365 environment in a single, unified platform with one installation. From onboarding, day-to-day user and environmental analysis, license and storage quota optimization, to security and backup/restore operations, Essentials reduces administrative workload while ensuring that Office 365 remains secure and efficient.

Single, Extensible Platform

Administer your Office 365 environment from a single, unified UI that provides all of the functionality of the disparate administrative portals and

custom PowerShell scripts that Admins leverage as well as powerful analysis, remediation, migration, backup, and security functionality. Essentials puts complete control of your environment at your fingertips.

Single Hop Migration to the Cloud

Essentials enables you to migrate farms, tenancies, site collections, sites, lists, libraries, content, workflows, webparts, permissions, metadata, term stores, and more individually or in bulk. Regardless of your source environment, you can preserve values for lookup fields, managed metadata fields, and approval status as well as convert string, choice lookup, managed metadata and person/group fields into a desired target field type.

Complete Content Control

Manage your content whether you're coming from file shares, SharePoint, another Office 365 tenant, Exchange Online, another content management system, or a combination of them all. Upload or migration to Office 365 (including OneDrive) while taking action on metadata and converting to an Office 365-friendly format.

Simplified EFSS Migration

Migrate from Google Drive, Box, Dropbox, and File Shares into One-Drive for Business easily and quickly utilizing the on-the-fly remediation and conversion functionalities included in Essentials.

Built for the Cloud

Essentials utilizes multithreading and an agentless, single install solution to get the most performance and compatibility out of the resources made available through Office 365.

Nintex Migration

Essentials provides you with the ability to migrate your Nintex workflows, actions, and forms from your source environment to your target without the need for custom development or the engagement of services.

Pre-Migration Analysis

Identify and avoid potential pain points in your onboarding process. Incompatibilities,

disallowed file types, and many other potential hindrances to your migration are identified and color coded by order of severity and explained in easy to understand terms to allow for quick and painless remediation.

Post Migration Validation and Failed Item Reprocessing

Essentials eliminates the need for manual post-migration validation by logging the operations undertaken during a migration and detailing their success or failure. Failed items are listed with easy-to-understand error explanations and can be re-tried with the click of a button.

Tech Specs
