Modernize and manage your Active Directory & Office 365 environments

Get end-to-end support for your next Microsoft challenge.

THE CHALLENGE

In your Microsoft environment, next never stops. Whether it’s the next merger or acquisition, Office 365 migration, compliance audit or ransomware threat to your Active Directory, your environment is constantly evolving.

To keep your environment modern and scalable, your next goals need to involve:

- Adopting the cloud faster with minimal business disruptions
- Securing your business and customer data
- Meeting and maintaining compliance as regulations evolve
- Minimizing business interruptions and keep people working
- Predicting cost and timeline of migrations and M&As

Achieving these goals can be complex, especially when there are so many elements to consider and pitfalls to avoid.

Evolving and modernization often means expanding, and expansion can be often leads to gaps in security. Azure AD currently has over 425M active users, and of those, 1.2M Azure AD accounts are compromised each month.

Cyber criminals will target your growing cloud environments, and with research showing that ransomware will hit its target every eleven seconds, the risk of being compromised is very high.

When you factor in the explosion of Office 365 and Teams — which is expected to continue to grow — and the fact that M&A activity is expected to increase post 2021, the goal of keeping your environments secure, adaptable and manageable becomes even more difficult.

HOW THIS AFFECTS YOU

Failing to prepare for and manage these challenges can lead to devastating results, such as excessive and unpredictable costs that will blindside your organization, downtime and data loss, vulnerable endpoints, compliance failures and increasingly steep fines. Factor in a reputation that you may never be able to shake off, and you’re looking at some serious consequences.
The go-to expert to help you move faster, tighten security and stay in control of your Microsoft environment

A BETTER WAY
What if you could quickly and seamlessly plan, execute and manage your migrations? What if you could secure your Microsoft environment as tightly as your perimeter and ensure continuous compliance? What if you could easily manage any Microsoft environment — on-prem, cloud or hybrid — with fewer screens, fewer scripts and more automation?

WHAT YOU CAN DO ONLY WITH QUEST
Quest is the only company with end-to-end solutions for your next migration, management, and security challenges across any Microsoft platform, including Active Directory and Office 365 workloads such as Teams, SharePoint, OneDrive for Business and Exchange.

With more than 30 years of experience, 184 million AD accounts managed, 166 million accounts audited, 99 petabytes of SharePoint data managed, and 95 million accounts migrated, you can count on Quest for everything Microsoft. Move, manage and secure your most critical Microsoft platforms confidently with award-winning global support and services always at your side.

Conquer your next Microsoft migration
Whether moving to Office 365 or restructuring AD for M&As, a migration can take on a life of its own. But with 30 years of experience, we’ve seen it all before, so we know to expect the unexpected and how to react. With Quest you can conquer your next Microsoft migration (now and in the future) by making it a non-event for end users. Our zero-impact migration and consolidation solutions help simplify migration planning, overcome unforeseen challenges and finish projects faster.

Easily manage any Microsoft platform
Easily manage any Microsoft platform – on-prem, cloud or hybrid – with fewer screens, fewer scripts and more automation. Quest solutions help you save time and minimize security risks by automating all the manual administration tasks that consume your staff every day, including user and group management, Group Policy management, AD health monitoring, AD disaster recovery planning, Office 365 backup and license management.

Strengthen cybersecurity resilience against the next threat
Perimeter defense is no longer good enough, as Microsoft estimates 1.2 million Azure AD accounts are comprised each month. With Quest, you can secure your internal Microsoft environment as tightly as your perimeter to protect the most critical and targeted assets and ensure continuous regulatory compliance. Strengthen your cyber resilience against the next hybrid Active Directory and Office 365 security threat with go-to solutions to detect, defend against and recover from security incidents, outages or disasters.

• Automated governance and access control
• Proactive vulnerability assessment & remediation
• Real-time monitoring & alerting
• Fast forensic investigation & disaster recovery
