

NetVault® Plus

Enterprise data protection, backup acceleration, deduplication and replication

While the business demands an “always on, always available” environment, IT complexity and exponential data growth may be complicating and slowing down your backup and recovery process, affecting your recovery point objectives (RPOs) and adding unnecessary risk. In addition, you're using limited IT budget to continue investing in more and more storage to keep up, storing your backups onsite and even in the cloud. And while man-made and natural disasters are few and far between, they are a reality, and businesses need to prepare. But there is a solution.

Quest NetVault Plus combines the power of two Quest data protection products into a single package to simplify purchasing and maintenance: NetVault comprehensive data protection and QoreStor software-defined deduplication and replication.

CLLOUD-READY DATA PROTECTION FOR THE HYBRID DATA CENTER

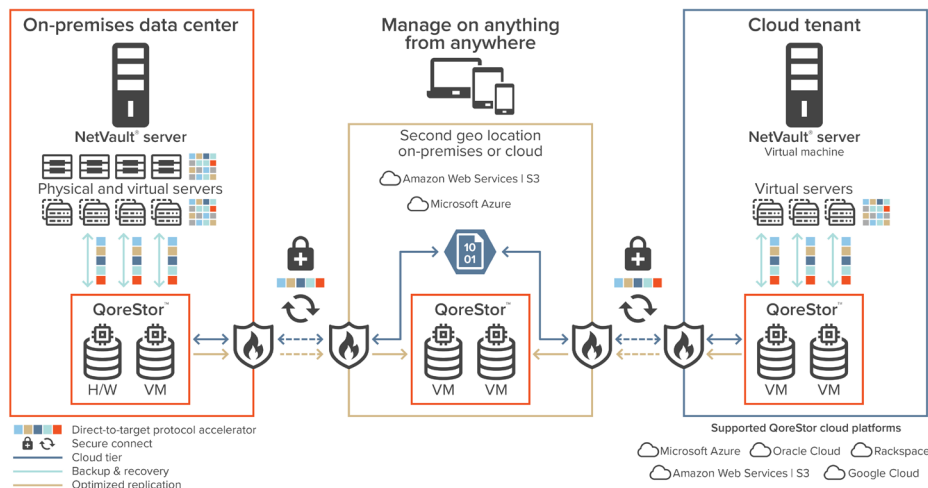

NetVault Plus protects your applications and data in complex IT environments and stores your backup data safely, securely and efficiently — simplifying backup and recovery in hybrid data center environments.

This powerful solution supports a wide range of operating system and application platforms in physical, virtual and cloud environments which means you can eliminate having to use multiple backup solutions. With NetVault Plus, you can ensure protection and recoverability of business-critical systems, applications and data, no matter where they reside, to protect your business from unexpected system outages, data loss and malicious cyberattacks.

With NetVault Plus, you can ensure protection and recoverability of business-critical systems, applications and data, while reducing storage costs.

BENEFITS:

- Simplify backup and recovery with a single solution for the enterprise
- Attain secure, resilient data transmission, replication and storage
- Gain better protection for systems, applications and data
- Achieve fast RTOs and granular RPOs
- Minimize risk of data loss by running backups more often
- Reduce storage requirements and costs, on-premises and in the cloud
- Connect to the cloud for low-cost, long-term data storage and disaster recovery

NetVault Plus combines NetVault and QoreStor into a single package to simplify purchasing and maintenance.

MORE POWER, MORE BENEFITS

NetVault Plus takes advantage of the power of QoreStor to deliver faster, more efficient and secure backups. This way you can run your backups more often and reduce the risk of system downtime and data loss. You'll reduce storage requirements by up to 95% to significantly reduce storage costs on-premises and in the cloud. You'll also shorten replication time and overcome inconsistent WAN connections while better leveraging the cloud for backup, long-term data storage and disaster recovery.

KEY FEATURES

- Physical, virtual and cloud protection for Windows, Linux, UNIX, Mac, VMware, VMWare Cloud on AWS, Hyper-V, Azure Cloud, AWS and more
- Broad application protection (Office 365, SQL, Exchange, Oracle, SharePoint, MySQL, DB2, PostgreSQL, SAP, NAS and more)
- Integrated content-aware, variable block dedupe engine with CloudTier technology to lower your backup storage requirements by an average of 95%
- Built-in patented encryption technology enhancing AES-256, in flight and at rest

- Built-in protocol accelerators to accelerate data ingest by up to 20TB/hour
- Centralized, enterprise-wide control for local, remote and cloud resources, extensive storage options including disk arrays, tape libraries, VTL
- Remote replication sends only unique data to a remote site to reduce replication windows by up to 15x while reducing network bandwidth use by up to 85%
- CloudTier enables use of low-cost Azure Blob and AWS S3 storage for long term data retention and recovery
- Direct-to-target backup allows you to bypass the media server and back up directly to the target storage device

ABOUT QUEST

Quest provides software solutions for the rapidly-changing world of enterprise IT. We help simplify the challenges caused by data explosion, cloud expansion, hybrid datacenters, security threats and regulatory requirements. Our portfolio includes solutions for database management, data protection, unified endpoint management, identity and access management and Microsoft platform management.
