DATA SHEET

NetVault® Plus

Enterprise data protection and disaster recovery software

While the business demands an “always on, always available” environment, IT complexity and exponential data growthmay be complicating and slowing down your backup and recovery process, affecting your recovery point objectives (RPOs) and adding unnecessary risk.

And with the growing risk of ransomware and other malware attacks, data protection is even more critical! In addition, you’re using limited IT budget to continue investing in more and more storage to keep up, storing your backups onsite and even in the cloud. And while man-madeand natural disasters are few and far between, they are a reality, and businesses need to prepare. But there is a solution

Cloud-Ready Data Protection for the hybrid data center

NetVault Plus protects your applications and data in complex IT environments and stores your backup data safely, securely and efficiently — simplifying backup and recovery in hybrid data center environments.

Benefits

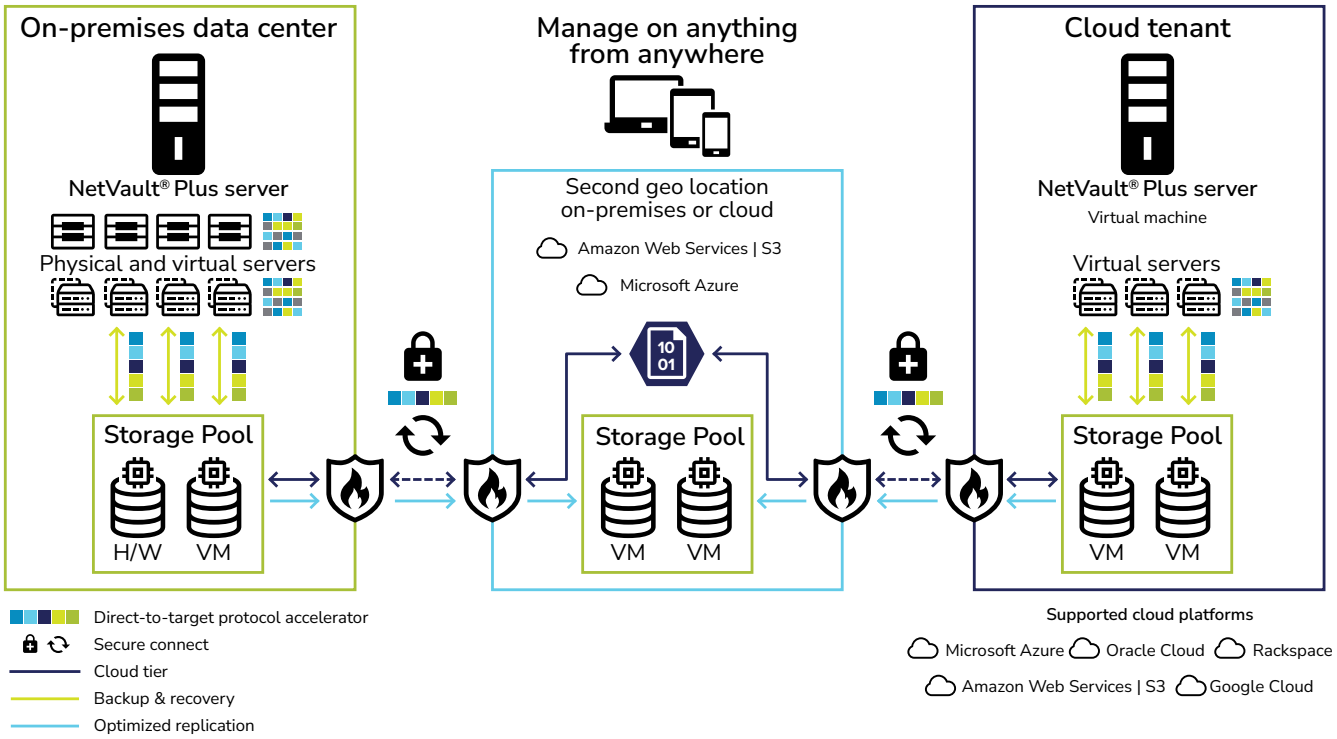
With NetVault Plus, you can ensure protection and recoverability of business-critical systems, applications and data, while reducing storage costs.

- Simplify backup and recovery with a single solution for the enterprise
- Gain ransomware protection that’s unavailable in other solutions
- Attain secure, resilient data transmission, replication and storage
- Gain better protection for systems, applications and data
- Achieve fast RTOs and granular RPOs
- Reduce risk of data loss and damage through Continuous Data Protection
- Reduce storage requirements and costs, on-premises and in the cloud
- Connect to the cloud for low-cost, long-term data storage and disaster recovery

This powerful solution supports a wide range of operating systems and application platforms in physical, virtual and cloud environments which means you can eliminate having to use multiple backup solutions. With NetVault Plus, you can ensure protection and recoverability of business-critical systems, applications and data, no matter where they reside, to protect your business from unexpected system outages, data loss and malicious cyberattacks.

Improve Ransomeware Resilience

Attackers know your backups are your last line of defense, so they target them for deletion. NetVault Plus protects your backups with immutability to prevent changes and deletions. You also get anomaly detection to ensure you aren't backing up hidden ransomware that could re-infect your data after recovery. Data encryption ensures hackers can't disclose confidential backup data. Plus, you get replication for a 3-2-1 backup strategy and air-gap backup to tape. NetVault Plus helps you recover after an attack as if it never happened.



NetVault Plus delivers unparalleled protection and recovery from ransomware and other cyberattacks.

More Power, More Benefits

NetVault Plus delivers faster, more efficient and secure backups. This way you can run your backups more often and reduce the risk of system downtime and data loss.

You'll reduce storage requirements by up to 93% to significantly reduce storage costs on-premises and in the cloud. You'll also shorten replication time and overcome unreliable WAN connections while better leveraging the cloud for backup, long-term data storage and disaster recovery.

Key Features

- Physical, virtual and cloud protection for Windows, Linux, UNIX, Mac, VMware, VMWare Cloud on AWS, Hyper-V, Azure Cloud, AWS and more
- Broad application protection (Microsoft Office 365, SQL, Exchange, Oracle, SharePoint, MySQL, DB2, PostgreSQL, SAP, NAS and more)
- Ransomware protection and recovery through immutable backups and backup recycle bin, anomaly detection encryption, MFA and air-gap backup to tape and cloud
- Instantly recover a virtual machine by mounting a VM image snapshot directly from the QoreStor repository. Includes deduplicated data.
- Continuous Data Protection (CDP) innovation that performs incremental forever protection of VMware virtual machines providing instant recovery direct from deduplicated storage, keeping recovery times and storage costs to a minimum
- Direct to cloud backup using AWS, Amazon, Google, IBM, Wasabi and other public clouds
- Integrated content-aware, variable block dedupe engine with CloudTier technology to lower your on-prem and cloud backup storage requirements by an average of 93%
- Built-in patented encryption technology enhancing AES-256, in flight and at rest
- Built-in protocol accelerators to accelerate data ingest by up to 20TB/hour
- Centralized, enterprise-wide control for local, remote and cloud resources, extensive storage options including disk arrays, tape libraries, VTL
- Remote replication sends only unique data to a remote site to reduce replication windows by up to 15x while reducing network bandwidth use by up to 85%
- CloudTier enables use of low-cost Azure
- Blob and AWS S3 storage for long term data retention and recovery
- Direct-to-target backup allows you to bypass the media server and back up directly to the target storage device

About Quest Software

Quest Software creates technology and solutions that build the foundation for enterprise AI. Focused on data management and governance, cybersecurity and platform modernization, Quest helps organizations address their most pressing challenges and make the promise of AI a reality. Around the globe, more than 45,000 companies including over 90% of the Fortune 500 count on Quest Software. For more information, visit www.quest.com or follow Quest Software on X (formerly Twitter) and LinkedIn.
