

# Quest® On Demand Migration

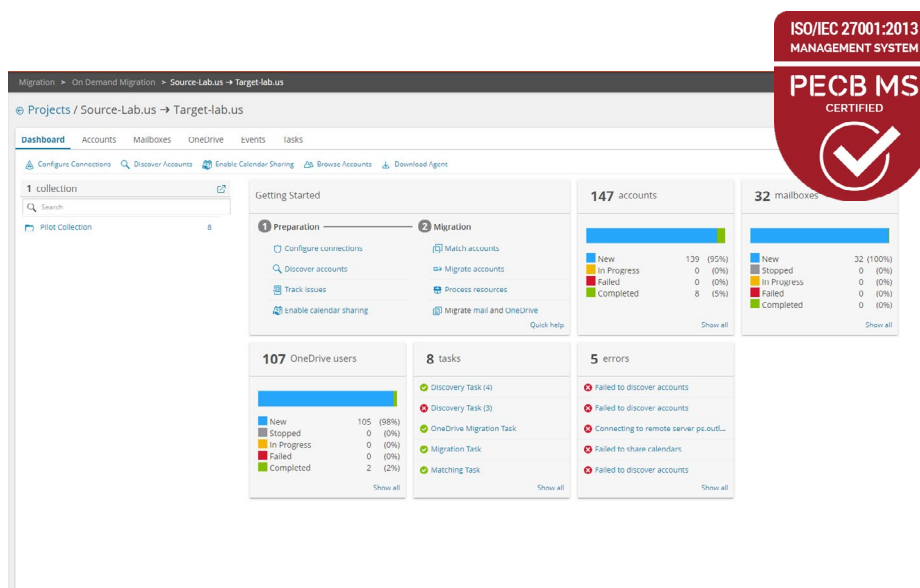

One simple and secure solution to migrate all your Office 365 workloads

The tremendous rate of Office 365 adoption and the increased rate of merger and acquisition activity creates an enormous challenge for IT. Organizations with multiple Office 365 tenants running various workloads including Exchange, OneDrive, SharePoint and Teams need to consolidate those tenants to reduce cost and complexity. Your IT team must maintain user collaboration and communication during consolidation and preserve access to valuable data, all while preventing downtime and data loss for the business.

The complexities of tenant migrations coupled with the fact that you don't do tenant migrations every day makes these projects hard to manage. Knowing what to migrate is crucial; scheduling and staging a migration is complex; and monitoring progress is difficult. Combined

with the ongoing challenge of limited IT resources, it's clear that automating the migration is necessary. Microsoft native tools don't address tenant migrations. So your organization is left with few options.

With Quest® On Demand Migration, you can forget about the complexity of migrating Office 365 tenants. On Demand Migration allows you to simply and securely consolidate and migrate all your Office 365 workloads. Through an intuitive dashboard, you get complete visibility into your migration project. You can track progress real-time, discover and assess source accounts, groups, and data, and migrate while ensuring coexistence. On Demand Migration lets your organization continue to communicate, collaborate, and ultimately continue to run smoothly throughout your tenant migration.

Manage end-to-end, tenant-to-tenant Office 365 migrations through a single interface.

"Easy interface, easy to identify issues and get status, and fast setup."

## FEATURES

### Pre-migration discovery and planning

Kick off your migration project with peace of mind by running On Demand Migration discovery to determine which accounts need to be migrated and when. You'll be able to:

- Avoid delays by identifying and matching all source and target users to eliminate duplication.
- Determine what the target infrastructure will look like and where user resources will be located.

### Hybrid Office 365 support

Hybrid Office 365 environments can be migrated with the use of Quest® Migration Manager for Active Directory. User accounts are migrated between on-premises Active Directory (AD) forests, and the accounts are synched to Azure AD, then matched with On Demand Migration.

### Mail and public folders

Keep your users communicating. Email is a vital part of communication and collaboration in your workplace. Ensure that users never lose access to their email data by migrating it to their new mailbox in the target tenant. Preserve shared email data stored in public folders. Migrate legacy archived data to meet compliance needs.

- Migrate mail to the primary mailbox or archive mailbox for each user
- Filter mail by folder, type and date to shorten migration time
- Ensure uninterrupted access by migrating permissions and delegates
- Schedule tasks to run immediately or at a future time
- Perform address rewriting to maintain a single domain brand for all or selected users
- Update Outlook profiles once migration completes

### OneDrive

Preserve valuable data. Migrate user OneDrive accounts to the new tenant allowing users continued access to file storage. Preserve document versions

and metadata associated with each document. Exclude unwanted data with filtering to increase migration speed.

- Preserve user and sharing permissions to allow continued access
- Filter data based on folder, type, date or size to speed migration
- Schedule migration tasks to meet your schedule

### SharePoint Online

### Microsoft Teams

Since Teams is the hub of communication and collaboration in Office 365 it's important to ensure that users never lose valuable data stored in Teams channels, conversations, and documents. Allow users to continue to participate and interact in discussions even after they have been migrated including all historical data. Merge or rename Teams as they are migrated to the new target tenant.

- Discover all Teams on the source including team members and groups

## QUEST® ON DEMAND SOLUTIONS

Platform changes and merger and acquisition (M&A) activity are occurring more frequently than ever before. In fact, according to Deloitte in a 2018 review, “Corporations and private equity firms foresee an acceleration of M&A activity in 2018 — both in the number of deals and the size of those transactions.” If you have Office 365 and you see M&A activity in your future, you will need to consolidate tenants. On top of that, like many companies, you’re likely on course to move more of your systems and processes to the cloud to support your increasingly mobile workforce. Only with Quest can you take advantage of more than 20 years of expertise migrating,

managing and securing Microsoft platforms — all through an Azure-hosted Software as a Service (SaaS) portfolio. We can help accelerate your quest to Azure and Office 365.
