

On Demand License Management

Control costs and gain complete visibility into Microsoft Office 365 and Azure AD licenses and utilization.

Because organizations find it difficult to accurately predict software license usage, many organizations buy more software licenses than they really need. They also find software license management cumbersome. Organizations need to identify unused licenses, assign the most cost-effective license based on usage, and manage license turnovers from staff changes and seasonal employees. All this results in wasting money.

Microsoft Office 365 licenses are no exception. Although moving to the cloud makes some administration easier, license management can be chaotic and often reactive. In order to proactively maintain control and manage costs, your organization needs visibility into your Office 365 licenses and utilization. You also need the insight to report on trends and estimated license costs and losses to support organizational changes.

To maintain control and manage costs, your organization needs to have complete visibility into Office 365 and Azure AD licenses and utilization.

BENEFITS:

- Complete SaaS platform for managing Microsoft challenges in a hybrid world
- Single UI which includes Recovery, Migration, Audit, Group Management and License Management
- Goes beyond capabilities of Office 365 to provide the visibility needed to manage the services at a deeper level.

License management dashboard – Gain insight into key information of hidden costs of licenses in a single location where you can customize the rates specific to your company.

Complete SaaS platform for managing Microsoft challenges in a hybrid world.

SYSTEM REQUIREMENTS

None - Hosted in Azure

Office 365 administrators are responsible for managing users' Office 365 and Azure AD licenses. This includes assigning and configuring licenses for new employees, cancelling or transferring existing licenses when employees leave the company, and reassigning unassigned licenses to other users.

Microsoft does not provide a deep view into license utilization or the ability to display it in a meaningful, actionable way. In some cases, one user could even end up with two different licenses. Office 365 license management is a crucial role that ensures the optimum number of licenses are available to support your business today and into the future and, more importantly, that you aren't spending valuable IT budget on more licenses than you really need.

Quest® On Demand License Management provides complete visibility into Office 365 and Azure AD licenses and includes the reporting capabilities you need to more easily achieve optimal license utilization.

In order to maintain control of and manage costs, your organization needs to have complete visibility into Office 365 licenses and utilization. You need to be able to:

- Determine how many Office 365 and Azure AD licenses are available and who are they assigned to.
- Determine if your end users are using the Office 365 services that have been provisioned.
- Customize rates to your organization to reveal real costs.
- Understand what the cost of un-utilized or under-utilized licenses are. And if you should consider a new licensing plan.

ABOUT QUEST

Quest provides software solutions for the rapidly changing world of enterprise IT. We help simplify the challenges caused by data explosion, cloud expansion, hybrid data centers, security threats and regulatory requirements. Our portfolio includes solutions for database management, data protection, unified endpoint management, identity and access management, and Microsoft platform management.
