

# Quest Secure Migration

Security and resilience built into every migration

## Identity change is inevitable. Risk doesn't have to be.

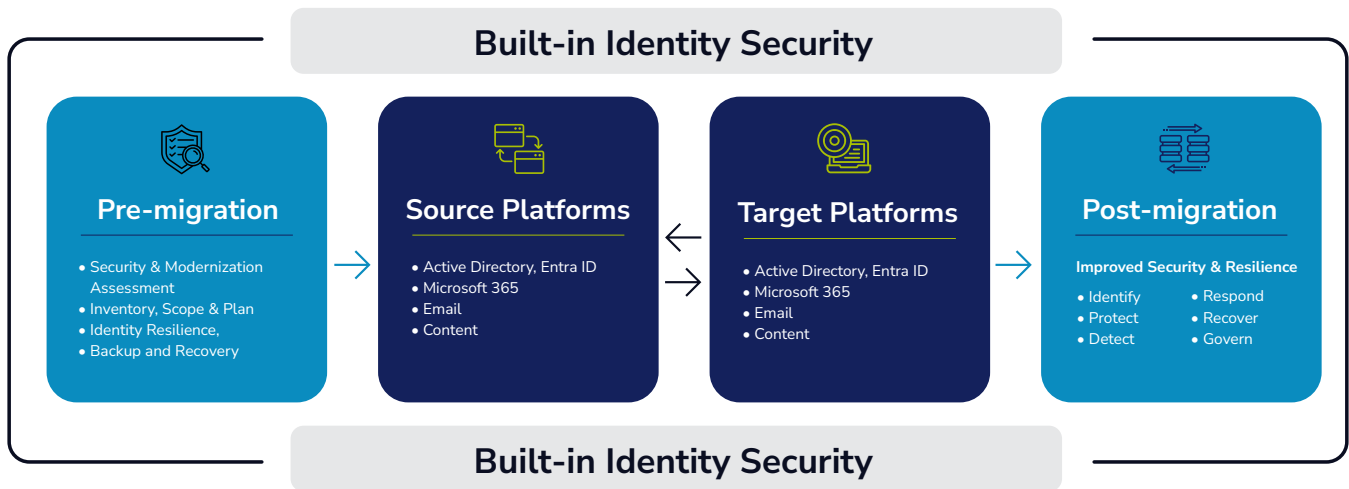

Organizations are forced to change their identity and Microsoft environments for many reasons — mergers and acquisitions, tenant and Active Directory consolidation, cloud adoption, security improvement, or preparation for AI. These initiatives are often unavoidable, time-sensitive, and high-stakes.

What's often overlooked is that migration itself is one of the highest-risk moments in the identity lifecycle. Privilege spikes, coexistence configurations, parallel directories, and policy drift create exposure precisely when environments are most vulnerable. Traditional migration tools focus on moving objects — not protecting identity while it changes.

Quest Secure Migration was built for these moments.

## Benefits

- Eliminate identity blind spots across migration phases by exposing Tier-0 risk, excessive privileges, and resilience gaps early
- Tightly control privilege and policy drift during coexistence with real-time audit, detection, and least-privilege enforcement
- Prevent migrations from becoming attack windows through live detection, containment, and rollback of risky identity changes
- Avoid carrying legacy exposure into the target state with stronger governance, detection, and recovery post-cutover
- Secure modernization with one platform unifying identity security, resilience, and migration

## Secure migration across every phase of change

Quest Secure Migration provides security and resilience before, during, and after migration, protecting identities, access, and productivity as environments evolve.

Whether driven by M&A, consolidation, cloud adoption, or AI readiness, Secure Migration safeguards identity and continuity across every phase of transformation – before, during, and after the migration.

## Built for real-world migration scenarios

Secure Migration supports organizations that are migrating from Active Directory to Entra ID, consolidating AD forests or Microsoft 365 tenants, completing inherited M&A migrations, reducing identity sprawl, or preparing for Copilot and AI initiatives. No matter the trigger, the goal is the same: modernize without introducing risk or disruption.

## Why Quest Secure Migration

Quest Secure Migration delivers end-to-end modernization across Active Directory, Entra ID, and Microsoft 365 with security and resilience built in from the start.

Instead of stitching together point tools, Quest protects identity before, during, and after migration activities. Real-time auditing and object-level recovery minimize exposure during high-risk change windows, while coexistence and automated device and profile updates preserve business continuity.

---

“We were not buying tools; we were buying knowledge. The people from Quest were highly engaged, supportive and knowledgeable, and they had already performed a massive number of large migrations like ours. We saw that they would be able to support us from day one through the entire project.”

Sylvain Cloutier, Vice President of Service Delivery, AtkinsRéalis

 Note 2: Can be sold standalone

## Flexible subscription plans

Quest Secure Migration is offered through flexible subscription plans aligned to your modernization journey.

All plans share core principles: security first, continuity, recovery readiness, and expert-backed execution.

### About Quest Software

Quest Software creates technology and solutions that build the foundation for enterprise AI. Focused on data management and governance, cybersecurity and platform modernization, Quest helps organizations address their most pressing challenges and make the promise of AI a reality. Around the globe, more than 45,000 companies including over 90% of the Fortune 500 count on Quest Software. For more information, visit [www.quest.com](http://www.quest.com) or follow [Quest Software on X \(formerly Twitter\)](#) and [LinkedIn](#).
