Achieve true IT resilience.

Introduction
For more than 30 years, Quest enterprise software solutions have been protecting and empowering identities, users, applications and data; streamlining IT operations and hardening cybersecurity from the inside out. Optimize productivity and protection with our comprehensive lineup of solutions for database and systems management, end-to-end Microsoft platform management and unified identity security.

The changing IT landscape
We help you realize true IT resilience so you can be absolutely assured that you can conquer the challenges that an ever-changing IT landscape throws your way. As an IT professional, you now have to deal with:

- **Ubiquitous connectivity** — 24/7 accessibility and three connected devices for every person on the planet by 2023

- **Data explosion** — 90 percent of the world’s data was created in the last two years

- **Complex access and security** — unprecedented increase in users, identities, accounts and access points into IT infrastructure

- **Increased cyberthreats** — it’s estimated that a business is hit with ransomware attacks every 11 seconds

Evolving cyberthreat risks
The nature of cyberthreats is changing. In the past, hackers focused on data that created immediate value for them: credit card numbers, social security numbers, account numbers, etc. Today, hackers focus on data that has value to your business. Your contracts, your SharePoint, your OneDrives, your email, your corporate systems.

Unfortunately, 74 percent of businesses report they are not cyber resilient. Is your organization resilient? Do you know how to get there? Are you prepared for what’s next NOW?

Explore the Quest enterprise software portfolio with solutions for IT operations, data operations and cybersecurity resilience.

Scale and streamline IT operations
Because your users’ patterns can change quickly, you need to ensure your IT operations are streamlined and able to adapt to the changes. Quest saves time and minimizes security risks by automating manual administration tasks that consume your staff everyday, including user and group management, Group Policy management, Active Directory health monitoring, user-identity permissions and compliance, disaster recovery planning, Office 365 backup and license management.

The Quest difference:
- 30+ years’ experience in delivering IT software solutions
- 95+ percent of the Fortune 500 rely on Quest products
- 15,000 experienced and dedicated partners
- 96% customer satisfaction worldwide
- 250,000,000 identities actively managed
- 130,000 customers in more than 100 countries
Our solutions can strengthen cybersecurity resilience against your next threat – and the one after that. You can secure your internal Microsoft environment as tightly as your perimeter to protect the most critical and targeted assets. Implement and ensure continuous regulatory compliance with solutions to detect, defend against and recover from security incidents, outages or disasters.

With Quest, you have access to an end-to-end solution portfolio; you can migrate faster, better manage your daily IT operations and strengthen cybersecurity resilience across any Microsoft platform. You’re firmly in control of your business.

**Unified identity security**

With the proliferation of human and machine identities, the race to the cloud, and the rise of remote working, protecting what’s essential to your business – your people, your data and your apps – is critical. The key impediment to doing so is the fragmented way in which most organizations manage access rights. Our Unified Identity Security Platform allows you to control identity sprawl by shifting from a fragmented to a holistic approach to identity security.

We bring together the key core elements of identity security to close the cybersecurity exposure gap, protect resources in the cloud and on-prem and ensure continuous regulatory compliance. We deliver 360-degree visibility, the ability to verify everything before granting access to your most-important assets, and unparalleled visibility, control, and protection.

**Data empowerment**

Data growth across a hybrid cloud environment quickly becomes a burden without the right solutions. However, with our data empowerment solutions, you can easily turn data into your greatest competitive advantage. We provide the visibility and context you need to harness any data from any source, enabling faster, data-driven decisions by empowering everyone in the organization to be more productive and effective.

With Quest, you can proactively ensure data availability, streamline IT operations and ensure business continuity. Our data governance solutions illuminate your data landscape, making it easy to see what data you have and where it resides.

Combined with our data protection and endpoint management solutions, you can feel confident your data is secure and accessible whenever and wherever you need it. Maximize the potential of your data and the infrastructure it runs on to achieve data empowerment.
