Ensuring that mission-critical servers are functioning optimally and client-side systems are fully operational can be a challenge, especially if you have limited resources. Your organization might not have a monitoring solution in place for your servers, forcing you to adopt a reactive approach to resolving server problems. Or your organization, like many others, might be utilizing disparate management tools for PCs and servers. If so, you might be unhappy with your existing server monitoring solution due to a number of factors, including:

- Lack of integration with existing systems management workflows
- Complexity of the solution that renders it unusable by a large portion of the IT staff
- Drain on the capabilities and time of an already overburdened IT team

**SERVER LOG MONITORING WITH THE KACE SYSTEMS MANAGEMENT APPLIANCE**

The KACE Systems Management Appliance (SMA) provides a better alternative — simple-to-use server log monitoring that is highly integrated with the appliance’s systems management functions and workflows. Server monitoring is an add-on service* to the KACE SMA that provides:

- Log monitoring and alerts for all KACE agent and agentless supported operating systems: Windows, Mac, Linux and UNIX
- Integration with the KACE SMA’s asset management, reporting and service desk, so alerts can automatically become tickets
- Integration with the KACE GO Mobile App for alerts on mobile devices

**BENEFITS:**

- Is simple to use and configure, making it ideal if your organization is new to server monitoring
- Extends your systems management to servers through tight integration with the KACE SMA’s asset management, reporting and service desk
- Provides mobile alerts and service desk through integration with the KACE GO Mobile app
- Offers built-in extensibility that allows it to grow with you

“Without the KACE appliance [in our environment], we would have had to hire two or three more people.”

Michael Williams, Director IT, Dexter Southfield

Enhance your systems management capabilities with server log monitoring integrated with asset management, reporting and service desk.
- A highly extensible design that enables you to expand capabilities with templates on ITNinja, an integrated independent IT user forum

**KACE SYSTEMS MANAGEMENT APPLIANCE**

Server log monitoring is an add-on function to the KACE Systems Management Appliance. The appliance provides comprehensive management for servers, PCs, Macs, Chromebooks, smartphones, tablets, printers, networking gear and other connected non-computing devices. It can fulfill all of your organization’s systems management needs, from initial deployment to ongoing management and retirement.

**Comprehensive functionality**

Available on premises as either a physical or a virtual appliance, or as a service via a hosted, cloud-delivered virtual appliance, the KACE SMA includes the following capabilities:

- Device discovery and inventory of all hardware and software network wide, including computers, servers, Chromebooks, and connected non-computing devices
- Patch management for automated vulnerability analysis and delivery of patches
- Asset management for comprehensive asset tracking and compliance reporting, including detailed software inventory and management of software licenses
- Software distribution to ensure all your systems are up to date

**Easy to deploy and fast time to value**

Unlike traditional software approaches that can require complex and time-consuming implementation and maintenance, the KACE SMA is based on an extremely flexible and intelligent appliance architecture that enables the solution to be both quickly deployed and continually self-maintained. The appliance is typically installed within a few days and delivers a return on your investment within a few months.

**ABOUT QUEST**

Quest helps our customers reduce tedious administration tasks so they can focus on the innovation necessary for their businesses to grow. Quest® solutions are scalable, affordable and simple-to-use, and they deliver unmatched efficiency and productivity. Combined with Quest’s invitation to the global community to be a part of its innovation, as well as our firm commitment to ensuring customer satisfaction, Quest will continue to accelerate the delivery of the most comprehensive solutions for Azure cloud management, SaaS, security, workforce mobility and data-driven insight.
