

Securing IAM to support business growth

Ulta Beauty protects its environment by ensuring identity security

Challenge

The largest beauty retailer in the United States was expanding but worried about potential security breaches, data loss, account takeover, and phishing as internal teams sought to protect employee identities. An expiring legacy solution led to action.

Solution

Implemented Identity Manager, a secure solution with SAP connectors and tight integration with Active Directory, to reduce risks around enterprise identity and access management. The company can now protect itself while allowing applications to work in a secure environment and know who's doing what, where.

“... SAP runs our enterprise. So we needed SAP-certified connectors, and Identity Manager had those. In addition to that, we didn't want a solution that we had to write a lot of custom code around. **We wanted to have a solution in which we could configure, not code.** And Identity Manager had **that.**”

Paul Lucido, Manager of IAM
