

What's new in the KACE® Systems Management Appliance 14.0?

Managing your endpoint environment keeps getting more and more complicated as your hybrid workforce requires a wider range of both traditional and modern devices to get work done. Deploying security updates and ensuring compliance across all your IT assets is time-consuming. As your environment continues to grow, you need a way to discover, manage and secure every endpoint connecting to your network.

For organizations of any size, balancing the ever-changing landscape of device types, operating system requirements and employee needs is nearly impossible without having the right tools in place. That's why the KACE® Systems Management Appliance by Quest® keeps evolving as your IT asset management and security needs evolve, making it possible to better service your end users' systems with a single solution.

Updates to the latest release, KACE Systems Management Appliance 14.0, include:

- System enhancements to maximize your productivity and create an intuitive workflow
- Built-in features to help you deploy patches and track updates with ease
- Improved administrator and user experience for your increasingly remote workforce

NEW FEATURES

- UI refresh – The appliance now offers a faster, simpler and more intuitive interface for a better user experience.
- Secure-appliance and GO enhancements – The new SMA 14.0 update includes backend upgrades and security improvements, plus new app features like dark mode and several bug fixes.
- All SMA agents converted to 64 bits – The KACE Systems Management Appliance is now built for 64 bit operating systems.

- Monitoring for all supported devices without additional fee – You can now monitor 200 devices for free on any Windows, Mac or Linux operating systems.
- Custom inventory – It's now easier to find the most powerful function for KACE SMA, which previously was not as visible.
