

Introducing Foglight® for Virtualization, Enterprise Edition 8.8

WHAT'S NEW IN FOGLEIGHT FOR VIRTUALIZATION, ENTERPRISE EDITION 8.8?

Quest® Foglight® for Virtualization goes far beyond basic VMware and Hyper-V monitoring to deliver controlled optimization that cleans up waste, promotes capacity planning to expose the impact of planned changes, and helps reduce costs.

Foglight supports VMware, Hyper-V, Amazon Web Services (AWS) and Microsoft Azure, and it can monitor critical applications such as Microsoft Active Directory, Exchange and Office 365. Get full visibility into your hybrid data center, including the physical and virtualized storage technologies that support your business.

Based on valuable customer and partner feedback, Foglight for Virtualization, Enterprise Edition 8.8, includes enhancements to help you calculate true on-premises and cloud-based virtualization costs, determine possible cost savings for moving to the cloud, and analyze your current cloud costs and utilization to derive a cost-benefit analysis.

This latest version of Foglight also supports Microsoft and VMware hyper-converged infrastructure (HCI) platforms, expands its storage array support, and simplifies SLA management. And you get a tech preview of the new Container Management feature, which helps you avoid performance bottlenecks and recover wasted compute resources across CPU, memory and storage. As part of the Foglight for Virtualization, Enterprise Edition 8.8,

release, Quest is also offering Foglight Hybrid Cloud Manager 3.0 and Foglight for Storage Management 4.6.

NEW FEATURES

Cost Director

- Calculate the true cost of your entire virtual environment — including Azure and AWS cloud resources. Aggregate all of the costs for your power, space, software licenses, add-ons, hardware, racks, servers and operating expenses.
- Capture active Azure and AWS subscriptions and aggregate monthly costs and utilization data. Determine whether you are underutilizing your resources and weigh the option of moving them to less expensive cloud resources — or even back on premises.*
- Access a live database of pricing for cloud-based and managed service provider (MSP) infrastructure-as-a-service (IaaS) offerings to enable practical analytics that automatically suggest on-premises virtual machines, cloud or MSP migrations to help reduce costs.

Hyper-converged infrastructure (HCI) support

- Get support for Microsoft Storage Spaces and VMware vSAN HCI platforms to help you simplify storage management, reduce storage costs and protect data from drive failures.
- Easily monitor these environments for improved staff productivity.

Enhanced service operations console

- Make use of advanced visualizations of service relationships, automatic OS-level dependency discovery and a greatly simplified service building workflow.

- Build services faster and easier, greatly reducing your management overhead.
- Enable your support teams to more easily find the root cause and understand the true impact of an event.

EMC VPLEX array support**

- Keep track of performance data to reduce time when later troubleshooting storage issues.

Container Management (tech preview)

- Monitor and analyze your containers to avoid wasted CPU, memory and storage.

Integration with Quest QorePortal™

- Simplify Foglight management, and get help analyzing the health of your Foglight resources.

Expanded VMware Support

- Support for VMware Cloud on Amazon Web Services (AWS).

ABOUT QUEST

At Quest, our purpose is to solve complex problems with simple solutions. We accomplish this with a philosophy focused on great products, great service and an overall goal of being simple to do business with. Our vision is to deliver technology that eliminates the need to choose between efficiency and effectiveness, which means you and your organization can spend less time on IT administration and more time on business innovation.

* Requires Foglight Hybrid Cloud Manager 3.0

** Requires Foglight for Storage Management 4.6
