

What's new in the KACE® Systems Management Appliance 11.0?

Managing your endpoint environment keeps getting more and more complicated as your hybrid workforce requires a wider range of both traditional and modern devices to get work done. Deploying security updates and ensuring compliance across all your IT assets is time-consuming. As your environment continues to grow, you need a way to discover, manage and secure every endpoint connecting to your network.

For organizations of any size, balancing the ever-changing landscape of device types, operating system requirements and employee needs is nearly impossible without having the right tools in place. That's why the KACE® Systems Management Appliance by Quest® keeps evolving as your IT asset management and security needs evolve, making it possible to better service your end users' systems with a single solution.

Updates to the latest release, KACE Systems Management Appliance 11.0, include:

- System enhancements to maximize your productivity and create an intuitive workflow
- Built-in features to help you deploy patches and track updates with ease
- Improved administrator and user experience for your increasingly remote workforce

NEW FEATURES

- **On-demand Windows patch deployment** — Allow your end users to trigger a staged update using a tray icon to schedule their own Windows patches.
- **Security Dashboard** — Readily understand the patching state of each device in your asset inventory.
- **Patch Schedule Wizard** — Create patch schedules and view easy-to-understand patching results.

- **Device security improvements** — Secure deployments — inside or outside of your DMZ — with user interface hardening and agent tunneling and quarantine.
- **Embedded training videos** — Readily access helpful training videos associated with the current page.
