Quest®

What's new in the KACE® Systems Management Appliance 12.0?

Managing your endpoint environment keeps getting more and more compli-cated as your hybrid workforce requires a wider range of both traditional and modern devices to get work done. Deploying security updates and ensuring compliance across all your IT assets is time-consuming. As your environment continues to grow, you need a way to discover, manage and secure every endpoint connecting to your network.

For organizations of any size, balancing the ever-changing landscape of device types, operating system requirements and employee needs is nearly impossible without having the right tools in place. That's why the KACE® Systems Manage-ment Appliance by Quest® keeps evolving as your IT asset management and security needs evolve, making it possible to better service your end users' systems with a single solution.

Updates to the latest release, KACE Systems Management Appliance 12.0, include:

- System enhancements to maximize your productivity and create an intuitive workflow

- Built-in features to help you deploy patches and track updates with ease

- Improved administrator and user experience for your increasingly remote workforce

NEW FEATURES

- **Nutanix support —** The appliance, with its newly extended support portfolio, is now able to host Nutanix for seamless cloud service and storage support.

- **Azure and AWS S3 storage support —** You can now configure your appliance to use cloud-based offboard backup such as the Microsoft Azure Blob and Amazon S3 storage.

- **Scalability enhancements —** The KACE Systems Management Appliance now enables you to manage up to 30% more endpoints using default configurations.

- **Knowledge base articles suggested at ticket creation —** With the new SMA 12.0, some new Service Desk tickets might be avoided by automatically showing related knowledge base articles as users enter data into the entry fields.
